

WING LOADING NOMOGRAM

EXAMPLE

Your 700 sq. in. model weighs 6 3/4 lbs. To find the loading, draw a line from the 700 sq. in. point on the right-hand scale to the 6 3/4 lb. point on the left-hand scale. Read the loading where the line crosses the center scale (in this case, 22oz. / sq. ft.)

In addition, the scale can be used as a conversion scale for oz. to lbs., grams per sq. decimeter to oz. per sq. ft. and sq. in. to sq. feet respectively.
