

*Up for auction is a YS .60 FR Rear Exhaust Pattern R/C Airplane Engine. It has been run (perhaps a gallon of fuel) and is in excellent condition. It has been upgraded with Boca stainless steel bearings. This engine has the built in pump system that provides positive fuel supply no matter what attitude or location of fuel tank is in. It is known as one of the most powerful for its size (it's a screamer). Of all the engines I have ever had or worked with, the YS is the Best in Quality and Performance.*
